AUGUSTINE ALFRED ABA

Microsoft Cloud Security (Entra ID & Azure IAM) · Penetration Testing · QA & Software Testing · Custom Tools · IT Support

Lagos, Nigeria · Remote | +234 906 350 2829 | austinaba2@gmail.com | linkedin.com/in/iamcybertech | github.com/cyber39glt

PROFILE

Cybersecurity practitioner (CNSP) focused on Microsoft cloud security. I design least-privilege access in Microsoft Entra ID and Azure, test software thoroughly, and build custom tools that solve real security problems. Two penetration testing internships gave me hands-on offensive experience. As a former CompTIA Network+ instructor, I explain technical topics clearly and document what I build. I am seeking remote work in Azure IAM, QA and software testing, custom tooling, IT support, or technical AI evaluation.

SKILLS

Microsoft cloud identity	Entra ID app registrations, service principals and admin consent · Azure RBAC and custom roles · least-privilege access design · MFA · Microsoft Defender for Cloud · Azure Activity Log
Offensive security	Web and network penetration testing · OWASP Top 10 · Active Directory attack paths · Burp Suite, Nmap, SQLmap, BloodHound, CrackMapExec, Mimikatz · MITRE ATT&CK · traffic analysis (Zeek, Suricata)
QA & software testing	Manual testing (functional, exploratory, regression, user acceptance) · test case design · bug tracking in Jira · automated testing (pytest, Vitest) · end-to-end smoke tests · root-cause analysis · CI with GitHub Actions
Custom tools	Python (FastAPI) · TypeScript and React · PostgreSQL · REST APIs · Docker · LLM integration (Meta Model API) · security dashboards and PDF, CSV and JSON reporting
IT & admin support	Networking (OSI, TCP/IP, routing, switching) · troubleshooting · hardware maintenance · Windows and PowerShell · Wireshark · Microsoft Office

EXPERIENCE

Freelance Cloud Security Tools Developer 2026 – Present

Client: cloud security consultancy (name withheld) · Remote

- Built **CloudSecura**, a read-only platform that audits clients' Microsoft Azure subscriptions (Storage accounts, Azure SQL, Activity Log and Defender for Cloud). It produces reviewed reports mapped to CIS Benchmarks, NIST CSF 2.0 and SOC 2.
- Designed Azure access through a multi-tenant **Entra ID** app with admin consent and a **custom 7-permission read role**. An in-app guard blocks any write or data-plane request, so access is limited twice.
- Secured the platform's own users with mandatory MFA, Argon2id password hashing, account lockout and per-client access isolation.
- Manually tested every workflow end to end before release (sign-in and MFA, scans, review, reports, client isolation). Wrote **536 automated tests** and an end-to-end smoke test. The smoke test caught a release-blocking timing bug; I fixed the root cause and added a regression test.
- Documented the system: deployment guide, threat model and a client-facing product guide.

CompTIA Network+ Instructor 2024 – 2025

New Horizons · Lagos

- Taught networking, network security and troubleshooting. Prepared **30+ students** for CompTIA Network+ with an **85% pass rate**.
- Ran hands-on fault-finding labs with Cisco devices, Wireshark and network simulators.
- Developed course materials and gave clear, actionable feedback on student work.

INTERNSHIPS

Penetration Testing Intern 2025

RedyNox Security · Remote

- Conducted internal and external network assessments in simulated enterprise environments.
- Used BloodHound, CrackMapExec and Mimikatz for Active Directory exploitation, and automated enumeration with custom Bash and Python scripts.
- Contributed to red team exercises simulating adversary tactics based on MITRE ATT&CK.

Penetration Testing Intern 2024

Hacktify Security · Remote

- Took part in real-world web application penetration tests using Burp Suite, SQLmap and Nmap.
- Identified and reported OWASP Top 10 vulnerabilities during bug bounty simulations, and practised exploit development and privilege escalation in controlled labs.
- Triaged findings with the team and submitted professional vulnerability reports.

PROJECTS

BreachGraph AI · github.com/cyber39glt/breachgraph-ai 2026

Meta Global AI Developer Hackathon · solo

- Cloud identity attack-path analyser: a deterministic Python engine finds privilege-escalation paths from identities to sensitive data, including from offline AWS IAM exports.
- A Meta Muse Spark agent proposes least-privilege fixes, and a simulator re-runs the analysis to verify each one before it is accepted.

Virtual Network & Offensive Security Lab Self-directed

- Designed an office network connecting three buildings, and built a virtual lab of Kali Linux and Ubuntu machines for testing and monitoring network protocols.
- Analysed suspicious traffic with Zeek and Suricata, investigated phishing, ransomware and lateral-movement scenarios, and wrote incident reports.

Security Tooling & CTF Self-directed

- Built an automated XSS vulnerability scanner and a Linux-based automated scanning tool (github.com/cyber39glt).
- Completed 20+ red team challenges on TryHackMe.

CERTIFICATION & EDUCATION

Certified Network Security Practitioner (CNSP) 2026

B.Sc. Statistics · Joseph Sarwuan Tarka University, Makurdi
